**PLAYER EVALUATION AND SCOUTING REPORT**

**The Scouting Report developed by Don Reynolds Professional Baseball Group aims at providing athletes a snapshot of where their skills are currently and where their skills can take them in the future. The goal is to give athletes the grounds to improve their game with specific instruction from some of the best scouting talent in the nation.**

**TC Top Prospects works with Don Reynolds Professional Baseball Group who provide a collaborative effort on every Scouting Report they produce. With over 200 years of scouting experience from a group of 10+ scouts, they can create a unique scouting report for every athlete. Each report provides a projection of talent, specific instruction for improvement, and baseline rankings for each subcategory of scouting. These rankings are on a 1 to 5 scale, with 3 being average.**

**College Sports Evaluation produces objective data to give athletes insight into where their skills are currently. In addition, the data in the report can provide hard metrics on hitting and overall athleticism. Combining the objective and subjective data allows athletes to see where their strengths and weaknesses are and improve their overall game. You will find a glossary of all of the Blast Motion terms on the last page.**

**The results from this report are based solely on how the athlete performed in one day. Other factors play into skill level, and the report does not reflect the ability to improve or regress.**

**PLAYER EVALUATION AND SCOUTING REPORT**

**PLAYER BIO**

**TC NATIONAL TEAM BATES**

**PLAYER NAME:**  
Brock Budacki

**POSITION:**  
Catcher

**PLAYER NUMBER:**  
10

**GRAD YEAR:**  
2025

**WEIGHT:**  
160lbs

**HEIGHT:**  
5'10"

**THROWS:**  
Right

**BATS:**  
Right

**EVALUATION DATE: SEPTEMBER 16, 2021**

## TC Top Prospects

### ATHLETIC SKILLS

Feet	Hands	Reactions
5 - Above Average	5 - Above Average	5 - Above Average
Displays gd ftwrk and quick feet behind plate.	Displays soft hands/gd transfer skills	Displays gd reactions skills needed to be frntline catcher.

Body Control	Strength	Physical Development
5 - Above Average	4 - Slightly Above Average	4 - Slightly Above Average
Displays gd instincts and bdy cntrl	Strngth gains with maturity.	Gd build bdy type for catcher. Bdy profiles well for position.

### BASEBALL SKILLS

Range	Running	Arm Strength	Fielding
4 - Slightly Above Average	3 - Average	5 - Above Average	4 - Slightly Above Average
Blocks balls well out in front and displays gd reaction skills. Feel player catches on one knee too often with runners on base. Believe this is main factor in limiting players range/ability block balls to left and rht cons. Improve secondary with runners on base.	Underway runner. Lacks speed out of box.	Displays above avg arm when all things are equal and working. Needs to imprve making adjustments to pitches that take him offline and still has to make a throw. This comes back to proper setup with runners on.	Solid receiver behind plate. Hands work. Need to cont. to improve glove consistency. Too many drop balls.

Arm Accuracy	Hitting Ability	Power Potential
5 - Above Average	3 - Average	3 - Average
Displays excellent accuracy when pitch is on target. Learn to display same on breaking balls also.	Tall narrow uprht stance at plate. Positions hands too close to bdy feel limits players ability to get gd separation to contact consistently. has some vertical plane through hitting zne. Feel player will display imprvd barrel consistency with adjustments of bat position in setup.	Improved bat barrel position and adjustments on back leg will improve future power output.

### SUMMARY/NOTES

Solid young player with future as a backstop. Displays good judgement and ability to call own games. Would like to see more on field vocal leadership. Catching can be very demanding at times and requires tremendous focus and vision to see plays/scenarios developing on the field. Continue developing your onfield acumen as your physical tools cont to develop. The two will meet up soon and you will be a force at your position.

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

## College Sports Evaluation

### TC Top Prospects

#### Blast Motion PCR Scores

Plane	Connection	Rotation
40	36	39

#### Blast Motion Power Metrics

Bat Speed (mph)	Rot. Accel (g)	Peak Hand Speed (mph)	Power (kW)
59.8	5.9	17.6	2.53

#### Blast Motion Contact Metrics

Early Connection (deg)	Conn. at Impact (deg)	Vert. Bat Angle (deg)	Time to Contact (sec)	On Plane Eff. (%)	Attack Angle (deg)
125	99	-34	0.17	55	16

#### Exit Velocities

Exit Velo 1	Exit Velo 2	Exit Velo 3	Average
56	68	70	64.7

#### Foot Speed

30-1	30-2	Average
4.23	4.26	4.25

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

# BLAST<sup>®</sup> TERMINOLOGY

**Plane:** Scores the path of the swing as it moves towards the ball. Measured on a 20-80 scale.

**Connection:** Scores the early connection of your body from the early connection before the swing through the connection at impact. Measured on a 20-80 scale.

**Rotation:** Scored by combining rotational acceleration, bat speed, and power to determine the speed of the overall rotation of the swing. Measured on a 20-80 scale.

**Bat Speed:** Scores the total speed of the barrel of the bat at the time of impact. Ideal range: 53-67mph.

**Rotational Acceleration:** Scores how quickly your bat accelerates into the swing plane. Ideal acceleration is above 9.9g.

**Attack Angle:** The angle of the bat's path, at impact, relative to horizontal. A positive value indicates swinging up, and a negative value indicates swinging down, where zero is perfectly level. A positive attack angle will likely result in balls hit in the air (line drives, pop flies, and home runs). A negative attack angle will often result in grounders. Ideal range: 0-15 degrees.

**Early Connection:** The relationship between your body tilt and vertical bat angle at the start of the downswing. Establishing good connection (90 degrees) early in the swing helps you get on plane and increases your ability to adjust to all pitch locations. Ideal range: 80-105 degrees. 90 degrees is optimal for early connection.

**On Plane Efficiency:** Scores the plane of a swing based on the percentage matched from an optimal bat plane. Ideal range: 65%-85%.

**Connection At Impact:** Measures the relationship between your body tilt and vertical bat angle at impact. Maintaining good connection (90 degrees) for all pitch locations is an indicator of dynamic adjustability. Ideal range: 80-95 degrees. 90 degrees is optimal for connection at impact.

**Vertical Bat Angle:** The angle of the bat with respect to horizontal at the moment of impact. Vertical Bat Angle is measured in degrees and provides the location of the barrel of the bat relative to the knob of the bat at impact. Vertical Bat Angle will be zero when the barrel of the bat and the knob are parallel to the ground. Vertical Bat Angle will be negative when the barrel of the bat is below the knob of the bat at impact. Bat angle is dependent on pitch location, typically a negative number.

**Power:** The average Power generated during the swing is found from the effective mass of the bat, the Bat Speed at impact, and the average acceleration during the downswing. Power is measured in Watts. Higher Power is achieved when a hitter is able to swing a heavier bat and accelerate it to higher speeds. Ideal range: 1.75-3.75kW.

**Time To Contact:** Measures the time from the start of the downswing to impact. Ideal range: 0.15-0.20sec.

**Peak Hand Speed:** The fastest hand speed reached throughout the swing. Ideal range: 19-25mph.
