PLAYER EVALUATION AND SCOUTING REPORT

The Scouting Report developed by Don Reynolds Professional Baseball Group aims at providing athletes a snapshot of where their skills are currently and where their skills can take them in the future. The goal is to give athletes the grounds to improve their game with specific instruction from some of the best scouting talent in the nation.

TC Top Prospects works with Don Reynolds Professional Baseball Group who provide a collaborative effort on every Scouting Report they produce. With over 200 years of scouting experience from a group of 10+ scouts, they can create a unique scouting report for every athlete. Each report provides a projection of talent, specific instruction for improvement, and baseline rankings for each subcategory of scouting. These rankings are on a 1 to 5 scale, with 3 being average.

College Sports Evaluation produces objective data to give athletes insight into where their skills are currently. In addition, the data in the report can provide hard metrics on hitting and overall athleticism. Combining the objective and subjective data allows athletes to see where their strengths and weaknesses are and improve their overall game. You will find a glossary of all of the Blast Motion terms on the last page.

The results from this report are based solely on how the athlete performed in one day. Other factors play into skill level, and the report does not reflect the ability to improve or regress.

PLAYER EVALUATION AND SCOUTING REPORT

PLAYER BIO

TC TOP PROSPECTS MURPHY

PLAYER NAME:
Juan Hernandez

POSITION:
4rd Base

PLAYER NUMBER:
26

GRAD YEAR
2025

WEIGHT:
180lbs

HEIGHT:
5'11"

THROWS:
Right

BATS:
Right

EVALUATION DATE: SEPTEMBER 16, 2021

Don Reynolds Professional Baseball Group

TC Top Prospects

ATHLETIC SKILLS

Feet	Hands	Reactions
4 - Slightly Above Average	4 - Slightly Above Average	4 - Slightly Above Average
Feet work most of the time but tendency to hurry does not allow consistent footwork.	Soft and sure for the most part. Again will rush and lose consistency.	Body is in early ready position which allows him to react quickly.

Body Control	Strength	Physical Development
4 - Slightly Above Average	4 - Slightly Above Average	4 - Slightly Above Average
Body going through physical changes and he is learning to adjust.	Growing into strength daily and will be a more physical player.	At that maturing stage in his life. Has gotten bigger and stronger since last seen.

BASEBALL SKILLS

Range	Running	Arm Strength	Fielding
4 - Slightly Above Average	3 - Average	5 - Above Average	4 - Slightly Above Average
Will get better here as he matures and 1st step comes along.	Body not yet strong enough to carry muscle. This will become better but not a factor in his game.	Strong durable arm. Easy arm action that allows him to pitch as well.	Reacts well and gets body in solid fielding positions.

Arm Accuracy	Hitting Ability	Power Potential
4 - Slightly Above Average	4 - Slightly Above Average	5 - Above Average
Gets ahead of himself at times and rushes. This rushing causes him to be off target at times. Fixable.	Feel for strike zone and his ability. Showed ability to use field. Quick bat.	Strong body on the way with this kid. Quick bat with the ability to use field will translate into plus power down the road.

SUMMARY/NOTES

Baseball player here with high ceiling. RHP with solid FB/CB mix. Has ability to throw strikes and handle a solid work load. Best fit is 3B. Strong arm and clean glove work make him an above avg. fielder. He shows ability to hit and will become a consistent power threat in future. Is a physical player in a young developing body. Passion to play the game is evident and will serve his career well. Joy to be around for coaches and his teammates. Needs to continue on his present gap to gap line drive approach. Staying within himself will allow the good to continue to play.

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

Blast Motion PCR Scores

Plane	Connection	Rotation
66	59	45

Blast Motion Power Metrics

Bat Speed (mph)	Rot. Accel (g)	Peak Hand Speed (mph)	Power (kW)
66.4	8	21.3	3.64

Blast Motion Contact Metrics

Early Connection (deg)	Conn. at Impact (deg)	Vert. Bat Angle (deg)	Time to Contact (sec)	On Plane Eff. (%)	Attack Angle (deg)
83	81	-27	0.16	83	1

Exit Velocities

Exit Velo 1	Exit Velo 2	Exit Velo 3	Average
81	82	80	81.0

Foot Speed

30-1	30-2	Average
3.96	4.02	3.99

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

BLAST[®] TERMINOLOGY

Plane: Scores the path of the swing as it moves towards the ball. Measured on a 20-80 scale.

Connection: Scores the early connection of your body from the early connection before the swing through the connection at impact. Measured on a 20-80 scale.

Rotation: Scored by combining rotational acceleration, bat speed, and power to determine the speed of the overall rotation of the swing. Measured on a 20-80 scale.

Bat Speed: Scores the total speed of the barrel of the bat at the time of impact. Ideal range: 53-67mph.

Rotational Acceleration: Scores how quickly your bat accelerates into the swing plane. Ideal acceleration is above 9.9g.

Attack Angle: The angle of the bat's path, at impact, relative to horizontal. A positive value indicates swinging up, and a negative value indicates swinging down, where zero is perfectly level. A positive attack angle will likely result in balls hit in the air (line drives, pop flies, and home runs). A negative attack angle will often result in grounders. Ideal range: 0-15 degrees.

Early Connection: The relationship between your body tilt and vertical bat angle at the start of the downswing. Establishing good connection (90 degrees) early in the swing helps you get on plane and increases your ability to adjust to all pitch locations. Ideal range: 80-105 degrees. 90 degrees is optimal for early connection.

On Plane Efficiency: Scores the plane of a swing based on the percentage matched from an optimal bat plane. Ideal range: 65%-85%.

Connection At Impact: Measures the relationship between your body tilt and vertical bat angle at impact. Maintaining good connection (90 degrees) for all pitch locations is an indicator of dynamic adjustability. Ideal range: 80-95 degrees. 90 degrees is optimal for connection at impact.

Vertical Bat Angle: The angle of the bat with respect to horizontal at the moment of impact. Vertical Bat Angle is measured in degrees and provides the location of the barrel of the bat relative to the knob of the bat at impact. Vertical Bat Angle will be zero when the barrel of the bat and the knob are parallel to the ground. Vertical Bat Angle will be negative when the barrel of the bat is below the knob of the bat at impact. Bat angle is dependent on pitch location, typically a negative number.

Power: The average Power generated during the swing is found from the effective mass of the bat, the Bat Speed at impact, and the average acceleration during the downswing. Power is measured in Watts. Higher Power is achieved when a hitter is able to swing a heavier bat and accelerate it to higher speeds. Ideal range: 1.75-3.75kW.

Time To Contact: Measures the time from the start of the downswing to impact. Ideal range: 0.15-0.20sec.

Peak Hand Speed: The fastest hand speed reached throughout the swing. Ideal range: 19-25mph.
