**PLAYER EVALUATION AND SCOUTING REPORT**

The Scouting Report developed by Don Reynolds Professional Baseball Group aims at providing athletes a snapshot of where their skills are currently and where their skills can take them in the future. The goal is to give athletes the grounds to improve their game with specific instruction from some of the best scouting talent in the nation.

TC Top Prospects works with Don Reynolds Professional Baseball Group who provide a collaborative effort on every Scouting Report they produce. With over 200 years of scouting experience from a group of 10+ scouts, they can create a unique scouting report for every athlete. Each report provides a projection of talent, specific instruction for improvement, and baseline rankings for each subcategory of scouting. These rankings are on a 1 to 5 scale, with 3 being average.

College Sports Evaluation produces objective data to give athletes insight into where their skills are currently. In addition, the data in the report can provide hard metrics on hitting and overall athleticism. Combining the objective and subjective data allows athletes to see where their strengths and weaknesses are and improve their overall game. You will find a glossary of all of the Blast Motion terms on the last page.

The results from this report are based solely on how the athlete performed in one day. Other factors play into skill level, and the report does not reflect the ability to improve or regress.

## **PLAYER BIO**

**TC TOP PROSPECTS BATES**

**PLAYER NAME:**  
Landon Majerus

**POSITION:**  
RHP/RF

**PLAYER NUMBER:**  
27

**GRAD YEAR**  
2025

**WEIGHT:**  
200lbs

**HEIGHT:**  
6'4"

**THROWS:**  
Right

**BATS:**  
Right

**EVALUATION DATE: SEPTEMBER 16, 2021**

## Don Reynolds Professional Baseball Group

### TC Top Prospects

#### ATHLETIC SKILLS

Feet	Hands	Reactions
4 - Slightly Above Average	4 - Slightly Above Average	4 - Slightly Above Average
Moves well for big guy	Handles ball adeptly on mound and in field	Quick

Body Control	Strength	Physical Development
4 - Slightly Above Average	5 - Above Average	5 - Above Average
Especially good for his size	A lot more to come going forward	Frame call for big projection

#### BASEBALL SKILLS

Arm Action	Throwing	Arm Strength	Delivery
3 - Average	4 - Slightly Above Average	5 - Above Average	4 - Slightly Above Average
Needs to find consistent slot	Stays pretty much within self	Way ahead of peers	Frequently opens front side prematurely

Control	Fastball	Offspeed
3 - Average	5 - Above Average	3 - Average
Biggest challenge right now needs to pitch like playing accelerated game of catch	Size helps lever fb	Ways to go

#### SUMMARY/NOTES

Future div 1 rhs. Has ways to go but cant teach size and strength. A lot left to fill large body type. Could easily handle 20 more lbs going forward. Exhibits above ave arm strength and good bdy control for big guy!!! Because of size and long levers he has a lot of moving parts which effects overall command of pitches. The fact that he is still growing will effect timing as well. Will settle in once he is fully grown and gets grounded/fb has late life when down in the zone, breaking ball is more of a cement mixer at this time. ch up is work in progress. Mechanically one thing that will help him is to keep eyes on the target when throwing. Has penchant to look down and lose target prior to pitch. If you want to look down do it before starting delivery to plate. He also showed me good athleticism in rf with quick first step and closing speed .At the plate has long casting action with early front side. This effects his inability to stay in the strike zone for a longer period of time. Suggest practicing using a very short bat to help him with connection in swing. Has plus make up, he is a happy kid and fun to be around/his teammates like him.

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

## College Sports Evaluation

### TC Top Prospects

#### Blast Motion PCR Scores

Plane	Connection	Rotation
40	42	48

#### Blast Motion Power Metrics

Bat Speed (mph)	Rot. Accel (g)	Peak Hand Speed (mph)	Power (kW)
62.5	9.1	19	2.86

#### Blast Motion Contact Metrics

Early Connection (deg)	Conn. at Impact (deg)	Vert. Bat Angle (deg)	Time to Contact (sec)	On Plane Eff. (%)	Attack Angle (deg)
119	94	-30	0.18	55	15

#### Exit Velocities

Exit Velo 1	Exit Velo 2	Exit Velo 3	Average
74	78	72	74.7

#### Foot Speed

30-1	30-2	Average
3.83	3.87	3.85

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

# BLAST<sup>®</sup> TERMINOLOGY

**Plane:** Scores the path of the swing as it moves towards the ball. Measured on a 20-80 scale.

**Connection:** Scores the early connection of your body from the early connection before the swing through the connection at impact. Measured on a 20-80 scale.

**Rotation:** Scored by combining rotational acceleration, bat speed, and power to determine the speed of the overall rotation of the swing. Measured on a 20-80 scale.

**Bat Speed:** Scores the total speed of the barrel of the bat at the time of impact. Ideal range: 53-67mph.

**Rotational Acceleration:** Scores how quickly your bat accelerates into the swing plane. Ideal acceleration is above 9.9g.

**Attack Angle:** The angle of the bat's path, at impact, relative to horizontal. A positive value indicates swinging up, and a negative value indicates swinging down, where zero is perfectly level. A positive attack angle will likely result in balls hit in the air (line drives, pop flies, and home runs). A negative attack angle will often result in grounders. Ideal range: 0-15 degrees.

**Early Connection:** The relationship between your body tilt and vertical bat angle at the start of the downswing. Establishing good connection (90 degrees) early in the swing helps you get on plane and increases your ability to adjust to all pitch locations. Ideal range: 80-105 degrees. 90 degrees is optimal for early connection.

**On Plane Efficiency:** Scores the plane of a swing based on the percentage matched from an optimal bat plane. Ideal range: 65%-85%.

**Connection At Impact:** Measures the relationship between your body tilt and vertical bat angle at impact. Maintaining good connection (90 degrees) for all pitch locations is an indicator of dynamic adjustability. Ideal range: 80-95 degrees. 90 degrees is optimal for connection at impact.

**Vertical Bat Angle:** The angle of the bat with respect to horizontal at the moment of impact. Vertical Bat Angle is measured in degrees and provides the location of the barrel of the bat relative to the knob of the bat at impact. Vertical Bat Angle will be zero when the barrel of the bat and the knob are parallel to the ground. Vertical Bat Angle will be negative when the barrel of the bat is below the knob of the bat at impact. Bat angle is dependent on pitch location, typically a negative number.

**Power:** The average Power generated during the swing is found from the effective mass of the bat, the Bat Speed at impact, and the average acceleration during the downswing. Power is measured in Watts. Higher Power is achieved when a hitter is able to swing a heavier bat and accelerate it to higher speeds. Ideal range: 1.75-3.75kW.

**Time To Contact:** Measures the time from the start of the downswing to impact. Ideal range: 0.15-0.20sec.

**Peak Hand Speed:** The fastest hand speed reached throughout the swing. Ideal range: 19-25mph.
