PLAYER EVALUATION AND SCOUTING REPORT

The Scouting Report developed by Don Reynolds Professional Baseball Group aims at providing athletes a snapshot of where their skills are currently and where their skills can take them in the future. The goal is to give athletes the grounds to improve their game with specific instruction from some of the best scouting talent in the nation.

TC Top Prospects works with Don Reynolds Professional Baseball Group who provide a collaborative effort on every Scouting Report they produce. With over 200 years of scouting experience from a group of 10+ scouts, they can create a unique scouting report for every athlete. Each report provides a projection of talent, specific instruction for improvement, and baseline rankings for each subcategory of scouting. These rankings are on a 1 to 5 scale, with 3 being average.

College Sports Evaluation produces objective data to give athletes insight into where their skills are currently. In addition, the data in the report can provide hard metrics on hitting and overall athleticism. Combining the objective and subjective data allows athletes to see where their strengths and weaknesses are and improve their overall game. You will find a glossary of all of the Blast Motion terms on the last page.

The results from this report are based solely on how the athlete performed in one day. Other factors play into skill level, and the report does not reflect the ability to improve or regress.

PLAYER EVALUATION AND SCOUTING REPORT

PLAYER BIO

TC TOP PROSPECTS BATES

PLAYER NAME:

Sean Selzer

POSITION:

Outfield

PLAYER NUMBER:

12

GRAD YEAR:

2025

WEIGHT:

145lbs

HEIGHT:

5'10"

THROWS:

Left

BATS:

Left

EVALUATION DATE: SEPTEMBER 16, 2021

TC Top Prospects

ATHLETIC SKILLS

Feet	Hands	Reactions
4 - Slightly Above Average	4 - Slightly Above Average	5 - Above Average
Shows quick footwork in the outfield; keeps base underneath his body; coordinated movements	Shows soft hands absorbs ground balls; has some bat speed with hand quickness	Shows you quick reaction times on balls off the bat; 1st step quickness; also has average reaction times when stealing bases off of pitchers

Body Control	Strength	Physical Development
4 - Slightly Above Average	4 - Slightly Above Average	4 - Slightly Above Average
Gets in solid position on the defensive side of the ball; getting better on the offensive side	Shows some natural strength right now with bat; projects to be more physical and stronger due to drive shown	Lean build with frame to add mass & strength; wiry strong right now; athletic build; shallow chest; average limbs for age

BASEBALL SKILLS

Range	Running	Arm Strength	Fielding
4 - Slightly Above Average	5 - Above Average	5 - Above Average	4 - Slightly Above Average
Covers a lot of real estate in the outfield; shows instinctive reactions with closing speed; aggressive approach; will be above average with better routes	Above average speed that is utilize on both sides of the game; covers ground in the outfield and on the base pads;	Shows above average arm strength for his age group; needs to work on getting on top of the ball on throws from the outfield; has natural pitcher tailing action on throws	Soft hands when receiving baseball; gets adequate jumps on balls off the bat; needs to take better routes on balls in both gaps; solid on balls coming in

Arm Accuracy	Hitting Ability	Power Potential
4 - Slightly Above Average	4 - Slightly Above Average	3 - Average
Due to tailing action can occasionally throw off line and needs to work on hitting the cutoff more consistently	Shows more ability than he showed results in tournament; shows aptitude for the tasks; able to separate at bats from his defensive play; has bat speed	Shows the making of average power; has bat speed more of a pull type 2B's hitter presently will have power to all fields once adjustments have been made; will get stronger

SUMMARY/NOTES

Solid 2 way player that will help his high school team on the mound as well as in the outfield and at the plate. Hard worker with aptitude to make adjustments. Has a baseball mentality with the will to get better. Handled adversity well & gave maximum effort while on the field. Shows enough talent to be able to continue baseball post high school. Interesting prospect look forward to keeping an eye on his development as an outfielder and pitcher. He is definitely not afraid of the moment and able to forget about the success and failures and move onto the next play.

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

Blast Motion PCR Scores

Plane	Connection	Rotation
58	77	73

Blast Motion Power Metrics

Bat Speed (mph)	Rot. Accel (g)	Peak Hand Speed (mph)	Power (kW)
63.1	18.4	21.8	3.25

Blast Motion Contact Metrics

Early Connection (deg)	Conn. at Impact (deg)	Vert. Bat Angle (deg)	Time to Contact (sec)	On Plane Eff. (%)	Attack Angle (deg)
92	86	-26	0.15	74	5

Exit Velocities

Exit Velo 1	Exit Velo 2	Exit Velo 3	Average
78	73	81	77.3

Foot Speed

30-1	30-2	Average
3.91	3.93	3.92

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

BLAST[®] TERMINOLOGY

Plane: Scores the path of the swing as it moves towards the ball. Measured on a 20-80 scale.

Connection: Scores the early connection of your body from the early connection before the swing through the connection at impact. Measured on a 20-80 scale.

Rotation: Scored by combining rotational acceleration, bat speed, and power to determine the speed of the overall rotation of the swing. Measured on a 20-80 scale.

Bat Speed: Scores the total speed of the barrel of the bat at the time of impact. Ideal range: 53-67mph.

Rotational Acceleration: Scores how quickly your bat accelerates into the swing plane. Ideal acceleration is above 9.9g.

Attack Angle: The angle of the bat's path, at impact, relative to horizontal. A positive value indicates swinging up, and a negative value indicates swinging down, where zero is perfectly level. A positive attack angle will likely result in balls hit in the air (line drives, pop flies, and home runs). A negative attack angle will often result in grounders. Ideal range: 0-15 degrees.

Early Connection: The relationship between your body tilt and vertical bat angle at the start of the downswing. Establishing good connection (90 degrees) early in the swing helps you get on plane and increases your ability to adjust to all pitch locations. Ideal range: 80-105 degrees. 90 degrees is optimal for early connection.

On Plane Efficiency: Scores the plane of a swing based on the percentage matched from an optimal bat plane. Ideal range: 65%-85%.

Connection At Impact: Measures the relationship between your body tilt and vertical bat angle at impact. Maintaining good connection (90 degrees) for all pitch locations is an indicator of dynamic adjustability. Ideal range: 80-95 degrees. 90 degrees is optimal for connection at impact.

Vertical Bat Angle: The angle of the bat with respect to horizontal at the moment of impact. Vertical Bat Angle is measured in degrees and provides the location of the barrel of the bat relative to the knob of the bat at impact. Vertical Bat Angle will be zero when the barrel of the bat and the knob are parallel to the ground. Vertical Bat Angle will be negative when the barrel of the bat is below the knob of the bat at impact. Bat angle is dependent on pitch location, typically a negative number.

Power: The average Power generated during the swing is found from the effective mass of the bat, the Bat Speed at impact, and the average acceleration during the downswing. Power is measured in Watts. Higher Power is achieved when a hitter is able to swing a heavier bat and accelerate it to higher speeds. Ideal range: 1.75-3.75kW.

Time To Contact: Measures the time from the start of the downswing to impact. Ideal range: 0.15-0.20sec.

Peak Hand Speed: The fastest hand speed reached throughout the swing. Ideal range: 19-25mph.
