PLAYER EVALUATION AND SCOUTING REPORT

TOP PROSPECTS **DON REYNOLDS** **PROFESSIONAL BASEBALL GROUP**

PLAYER EVALUATION AND SCOUTING REPORT

The Scouting Report developed by Don Reynolds Professional Baseball Group aims at providing athletes a snapshot of where their skills are currently and where their skills can take them in the future. The goal is to give athletes the grounds to improve their game with specific instruction from some of the best scouting talent in the nation.

TC Top Prospects works with Don Reynolds Professional Baseball Group who provide a collaborative effort on every Scouting Report they produce. With over 200 years of scouting experience from a group of 10+ scouts, they can create a unique scouting report for every athlete. Each report provides a projection of talent, specific instruction for improvement, and baseline rankings for each subcategory of scouting. These rankings are on a 1 to 5 scale, with 3 being average.

College Sports Evaluation produces objective data to give athletes insight into where their skills are currently. In addition, the data in the report can provide hard metrics on hitting and overall athleticism. Combining the objective and subjective data allows athletes to see where their strengths and weaknesses are and improve their overall game. You will find a glossary of all of the Blast Motion terms on the last page.

The results from this report are based solely on how the athlete performed in one day. Other factors play into skill level, and the report does not reflect the ability to improve or regress.

PLAYER EVALUATION AND SCOUTING REPORT

PLAYER BIO

PLAYER NAME:
Tristan Jones

POSITION:
Center Field

PLAYER NUMBER:
11

GRAD YEAR:
2025

WEIGHT:
145lbs

HEIGHT:
5'9"

THROWS:
Left

BATS:
Left

TC TOP PROSPECTS MURPHY

EVALUATION DATE: SEPTEMBER 16, 2021

Don Reynolds Professional Baseball Group

TC Top Prospects

ATHLETIC SKILLS

Feet	Hands	Reactions
5 - Above Average Light, quick feet, accelerates in first step	4 - Slightly Above Average Confident catching ball in air, needs work on ground ball transfer	4 - Slightly Above Average Reads need to improve on ball right at him. Good reactions to lateral plays

Body Control	Strength	Physical Development
4 - Slightly Above Average Good on defense. Need to improve balance and posture in swing mechanics..	3 - Average Good body structure. Will get stronger naturally which will improve his overall game.	3 - Average Medium frame. Will fill out to be a solid built player.

BASEBALL SKILLS

Range	Running	Arm Strength	Fielding
5 - Above Average Plays to his speed, can close gap.	5 - Above Average Good runner, best tool.	3 - Average Average now, needs to get behind throws better, gets long in arm slot reducing arm quickness.	4 - Slightly Above Average Speed to make range plays. Can improve angles on ball over head.

Arm Accuracy	Hitting Ability	Power Potential
4 - Slightly Above Average On line to bases fine.	3 - Average Going through some swing adjustments now, his load and body posture adjustments will improve his bat speed in the zone to aid his contact	2 - Slightly Below Average Will be gap to gap type hitter, power will be down the road but don't see it being a factor in his offensive game value.

SUMMARY/NOTES

Developing athlete, needs to continue playing the game to make adjustments and instincts. Will go through some stretches where game gets fast.. willing to learn and stay positive about himself. Has a tool,speed, that will be his asset. In time with maturity, we can see a whole different player offensively.

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

Blast Motion PCR Scores

Plane	Connection	Rotation
48	59	52

Blast Motion Power Metrics

Bat Speed (mph)	Rot. Accel (g)	Peak Hand Speed (mph)	Power (kW)
53.1	10.7	17.6	2.41

Blast Motion Contact Metrics

Early Connection (deg)	Conn. at Impact (deg)	Vert. Bat Angle (deg)	Time to Contact (sec)	On Plane Eff. (%)	Attack Angle (deg)
81	81	-39	0.14	64	7

Exit Velocities

Exit Velo 1	Exit Velo 2	Exit Velo 3	Average
64	69	70	67.7

Foot Speed

30-1	30-2	Average
4.01	4.20	4.11

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projection of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where you are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you potentially could be.

BLAST® TERMINOLOGY

Plane: Scores the path of the swing as it moves towards the ball. Measured on a 20-80 scale.

Connection: Scores the early connection of your body from the early connection before the swing through the connection at impact. Measured on a 20-80 scale.

Rotation: Scored by combining rotational acceleration, bat speed, and power to determine the speed of the overall rotation of the swing. Measured on a 20-80 scale.

Bat Speed: Scores the total speed of the barrel of the bat at the time of impact. Ideal range: 53-67mph.

Rotational Acceleration: Scores how quickly your bat accelerates into the swing plane. Ideal acceleration is above 9.9g.

Attack Angle: The angle of the bat's path, at impact, relative to horizontal. A positive value indicates swinging up, and a negative value indicates swinging down, where zero is perfectly level. A positive attack angle will likely result in balls hit in the air (line drives, pop flies, and home runs). A negative attack angle will often result in grounders. Ideal range: 0-15 degrees.

Early Connection: The relationship between your body tilt and vertical bat angle at the start of the downswing. Establishing good connection (90 degrees) early in the swing helps you get on plane and increases your ability to adjust to all pitch locations. Ideal range: 80-105 degrees. 90 degrees is optimal for early connection.

On Plane Efficiency: Scores the plane of a swing based on the percentage matched from an optimal bat plane. Ideal range: 65%-85%.

Connection At Impact: Measures the relationship between your body tilt and vertical bat angle at impact. Maintaining good connection (90 degrees) for all pitch locations is an indicator of dynamic adjustability. Ideal range: 80-95 degrees. 90 degrees is optimal for connection at impact.

Vertical Bat Angle: The angle of the bat with respect to horizontal at the moment of impact. Vertical Bat Angle is measured in degrees and provides the location of the barrel of the bat relative to the knob of the bat at impact. Vertical Bat Angle will be zero when the barrel of the bat and the knob are parallel to the ground. Vertical Bat Angle will be negative when the barrel of the bat is below the knob of the bat at impact. Bat angle is dependent on pitch location, typically a negative number.

Power: The average Power generated during the swing is found from the effective mass of the bat, the Bat Speed at impact, and the average acceleration during the downswing. Power is measured in Watts. Higher Power is achieved when a hitter is able to swing a heavier bat and accelerate it to higher speeds. Ideal range: 1.75-3.75kW.

Time To Contact: Measures the time from the start of the downswing to impact. Ideal range: 0.15-0.20sec.

Peak Hand Speed: The fastest hand speed reached throughout the swing. Ideal range: 19-25mph.
