DON REYNOLDS
PROFESSIONAL BASEBALL GROUP
PLAYER EVALUATION

The Scouting Report developed by Don Reynolds Baseball Group aims at providing athletes a snapshot of where their skills are currently and where their skills can take them in the future. The goal is to give athletes the grounds to improve their game with specific instruction from some of the best scouting talent in the nation.

TC Top Prospects works with Don Reynolds Baseball Group who provide a collaborative effort on every Scouting Report they produce. With over 200 years of scouting experience from a group of 10+ scouts, they can create a unique scouting report for every athlete. Each report provides a projection of talent, specific instruction for improvement, and baseline rankings for each subcategory of scouting. These rankings are on a 1 to 5 scale, with 3 being average.

College Sports Evaluation produces objective data to give athletes insight into where their skills are currently. In addition, the data in the report can provide hard metrics on hitting and overall athleticism. Combining the objective and subjective data allows athletes to see where their strengths and weaknesses are and improve their overall game. You will find a glossary of all of the Blast Motion terms on the last page.

The results from this report are based solely on how the athlete performed in one day. Other factors play into skill level, and the report does not reflect the ability to improve or regress.

PLAYER INFORMATION

Player's Name: Zackery Peck

Position: Outfield

Bats: Right

Throws: Right

Evaluation Date: Friday, March 18, 2022

Strength	Body
4	4
Fast Twitch	Balance
3	3
Agility	Posture
3	3
Explosiveness	Reactions
3	4
Athleticism	
4	

SUMMARY/NOTES

Young athletic looking player with solid chance to be high school varsity starter. Showed average to above average defensive skills. Defensive skill set may have shown better if he worked out at his primary position. Difficult to see and evaluate when out of position. With that said this is a solid defender with above average arm strength for this age group. Offensively has skills here that should put him in the middle of the line up. Has ability but needs to work hard on developing his body as well as his baseball skills. Body looks like his future may be as a 3rd baseman. Some loop in swing with upper cut actions. Needs to get back to gap line drive approach. Chance for him to become a solid player but it will take intentional work specific to his skills.

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projections of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you could potentially be.

COLLEGE SPORTS EVALUATION

CERTIFIED DATA

Blast Motion PCR Scores

Plane	Connection	Rotation
61	53	38

Blast Motion Power Metrics

Bat Speed (mph)	Rotational Acceleration (g)	Peak Hand Speed (mph)	Power (kW)
60.5	5.3	18.3	2.55

Blast Motion Contact Metrics

Early Connection (deg)	Connection at Impact (deg)	Vertical Bat Angle (deg)	Time to Contact (sec)	On Plane Efficiency (%)	Attack Angle (deg)
94	76	-31	0.2	78	12

Exit Velocity

Exit Velo 1	Exit Velo 2	Exit Velo 3	Average
62	66	65	64.3

Arm Velocity

Throw 1	Throw 2	Throw 3	Average
66	66	63	65.0

Foot Speed

60 Yard Dash Trial 1	60 Yard Dash Trial 2	Average
8.35	8.45	8.40

Please note, the Scouting Report and Summary portions of the Player Evaluation are meant to be a projections of where you could play. The Objective Data portion of the Player Evaluation is meant to show you where are at currently with your skill set. The goal is to use both objective and subjective data to build your current skill set into what you could potentially be.

BLAST[®] TERMINOLOGY

Plane: Scores the path of the swing as it moves towards the ball. Measured on a 20-80 scale.

Connection: Scores the early connection of your body from the early connection before the swing through the connection at impact. Measured on a 20-80 scale.

Rotation: Scored by combining rotational acceleration, bat speed, and power to determine the speed of the overall rotation of the swing. Measured on a 20-80 scale.

Bat Speed: Scores the total speed of the barrel of the bat at the time of impact. Ideal range: 53-67mph.

Rotational Acceleration: Scores how quickly your bat accelerates into the swing plane. Ideal acceleration is above 9.9g.

Attack Angle: The angle of the bat's path, at impact, relative to horizontal. A positive value indicates swinging up, and a negative value indicates swinging down, where zero is perfectly level. A positive attack angle will likely result in balls hit in the air (line drives, pop flies, and home runs). A negative attack angle will often result in grounders. Ideal range: 0-15 degrees.

Early Connection: The relationship between your body tilt and vertical bat angle at the start of the downswing. Establishing good connection (90 degrees) early in the swing helps you get on plane and increases your ability to adjust to all pitch locations. Ideal range: 80-105 degrees. 90 degrees is optimal for early connection.

On Plane Efficiency: Scores the plane of a swing based on the percentage matched from an optimal bat plane. Ideal range: 65%-85%.

Connection At Impact: Measures the relationship between your body tilt and vertical bat angle at impact. Maintaining good connection (90 degrees) for all pitch locations is an indicator of dynamic adjustability. Ideal range: 80-95 degrees. 90 degrees is optimal for connection at impact.

Vertical Bat Angle: The angle of the bat with respect to horizontal at the moment of impact. Vertical Bat Angle is measured in degrees and provides the location of the barrel of the bat relative to the knob of the bat at impact. Vertical Bat Angle will be zero when the barrel of the bat and the knob are parallel to the ground. Vertical Bat Angle will be negative when the barrel of the bat is below the knob of the bat at impact. Bat angle is dependent on pitch location, typically a negative number.

Power: The average Power generated during the swing is found from the effective mass of the bat, the Bat Speed at impact, and the average acceleration during the downswing. Power is measured in Watts. Higher Power is achieved when a hitter is able to swing a heavier bat and accelerate it to higher speeds. Ideal range: 1.75-3.75kW.

Time To Contact: Measures the time from the start of the downswing to impact. Ideal range: 0.15-0.20sec.

Peak Hand Speed: The fastest hand speed reached throughout the swing. Ideal range: 19-25mph.
